4 Months

### Omar

Omar is a delivery of products application. It has a user , deliveryman and a sender. User crates an advertisement post what he/she need to get the delivery man accepts that request and check for the shop which has that product and deliver to the user. The sender here is the shopkeeper instead who requests the user for the products and then the user accepts the request and then the delivery man picks the product from the sender(shopkeeper) and delivers to the user. In this PayPal payment gateway is integrated where the product price and the delivery man commission is paid by the user.

122 Days
